Maximize Your Savings

Summer is Here!

AC season is upon us! Which means most customers will consume more electricity. To maximize your savings during the summer months, it is best to use appliances that consume a lot of electricity, such as AC, during OFF PEAK hours before 4PM. It is best to turn on your air conditioner earlier in the day, ideally around 10am. This way your home is already at your preferred temperature during the warmest parts of the day, without needing to run your AC during the peak hours. This will save you money and reduce the strain on the grid.

Early Majority is Here for Solar

It is a monumental timestamp for Solar! We have reached the Early Majority phase in the Pacific West. Among homeowners in the Pacific West region, 45% say they've given serious thought to the use of solar panels to generate electricity for their home. While another 16% say they've already switched over to solar.*

This shows the monumental growth of solar in the last few years. In the second quarter of 2022, residential solar set its fifth consecutive quarterly growth record, according to the Solar Energy Industries Association. To help the growth of the solar industry you can receive a 30% federal tax credit.

What is Early Majority?

Early Majority customers are the percentage of consumers who buy a product after a few customers have tried and given positive feedback on an innovative product. Consumer Innovators and Early Adopters take all the risk initially, and the Early Majority consumers comes after. The Early Majority consumer is a pragmatist, who waits to buy a product after it has established its usefulness, longevity, and durability.

Equipment

Solar Panels

SunPower's solar cells are designed with their unique copper-backed technology, which reinforces cell strength, resists corrosion, and produces more electricity over time. Unlike, conventional solar cells that can crack easily or lose power over time, SunPower is built to last.

Home Energy Storage

SunVault is a powerful home solar energy storage system that powers your home, lowers your electric bills, and keeps the lights on when grid power goes out. SunVault is designed to help you manage your energy use, reduce peak-time charges, and maximize your use of solar.

Mounting Hardware

Quality mounting hardware will provide the greatest peace of mind for your roof's long-term integrity.

Heat Pumps

A heat pump can both heat and cool your home. Heat pumps maintain the temperature of your home by moving warm air into your home in the winter and transferring warm air out of your home in the summer.

Testimonial

Our solar panels were installed March 2020. After 3 years, Jon continues to go above and beyond! I didn't expect someone would still be working for the same company

and keep in touch with their customers. Low an behold I get a phone call from Jon's office, last week, to do an annual bill review with Jon!

I emailed my PG&E bill statements to him at the last second before our annual bill review started on "Zoom." He was able to review the statements, immediately, and spot the concerns, right away. Everything we went over was very beneficial and he was very patient and knowledgeable in explaining my electric bill statements. The bonus was when we went more in depth in my household energy usage, he provided tips and advice to save a lot more on my "True Up" amount.

Overall, thank you Jon for being focused on the customer, being honest, and keeping in touch with your customers! Your knowledge that you share is very valuable. You truly know how to provide a "WOW" customer experience! We can't say thank you, enough!!!

Fighting for Our Customers

The Solar Bill Review TEAM was in Sacramento on June 6th to continue to advocate for our customers! Roughly 30% of the legislators have been replaced since the last lobby day from CALSSA. These new legislators are largely unfamiliar with the solar fight over NEM 3, also known as Net Billing Tariff. We will continue to fight for our solar customers.

Now Hiring

SBRT is looking for fun loving teammates to deliver the news!
